AAC78458 to AAC78599 represent polynucleotide and ESI (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78097 represent PRR primers and probes used in
                                                                                                                                                                                                                                                                                                                                                                                                                                         detection methods,
                                                                                                                                                                                                                                                            Gerritsen ME;

```

comparing the PRO polypeptides of the invention. The sequences of the primers for PRO polypeptides of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to atimulate the proliferation of differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly advenal, ung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders. mammals and Gurney AL; Novel nucleic acids encoding PRO polypeptides, used to diagnose presence of tumours, such as prostate and breast tumours, in mam to screen for modulators of the compounds -Godowski PJ, Goddard A, Godo Wood WI,

This invention relates to murine and human ADAMTS-N (A disintegrin-like and metalloprotease domain with thrombospondin type I motifs) proteins, designated ADAMTS-S, 6, 7, 8, 9, 10 and R1. Also included in the invention are cDNA sequences encoding the proteins, and antibodies specific for the proteins. The nucleic acid sequences and proteins may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate ADAMTS-N expression. Disorders that may be treated using the nucleic acids; proteins and antibodies include, for example tumour cachexia, inflammation, dermatosparaxis in cattle or Enhers-Danlos Syndrome type VIIC (EDS-VIIC) in humans, erosion of articular cartilage in arthritic (both inflammatory and non-inflammatory) disease.
                                                                                                                                                                                                                                                                 Murine and human 'A Disintegrin-like And Metalloprotease domain with Thrombospondin type I motifs' proteins and the nucleic acids encoding them, useful for treating e.g. tumours, inflammation and arthritis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        300

ENCODING ANTI-ANGIOGENIC PEPTIDES AND THEIR USE IN GENE THERAPY
eq_cocumentation_circle.
Sequence 4, Application US/08985526
Patent No. 6080728
GENERAL INFORMATION:
APPLICANT: Mixson, James A.
TITLE OF INVENTION: CARRIER:DNA COMPLEXES CONTAINING DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         323 GluCysTyrAspLeuArgSerAsnArgValValAlaAspGlnTyrCysHi 339

/note—"Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Plasmid DNA from the normalized library NCI_CGAP_GC4 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1257096-1258631, 1469064-1470983, and 1475592-1476743). Subtraction by Bento Soares and M. Fatima Bonaldo. " a 157 c 169 g 121 t lothers
DNA Sequencing by: Washington University Genome Sequencing Center
Clone distribution: NCI-CGAP clone distribution information can be

/note—"Vector: pT713D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from 3 pooled perm cell tumors, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo."

Sequence 3. Application US/08985526

Betent No. 6080728

GENERAL INFORMATION:
APPLICANT: MISCONDERING AMPLICANT: MISCONDERING DNA
TITLE OF INVENTION: ENCODING ANTI-ANGIGGENIC PEPTIDES AND THEIR USE IN GENE
TITLE OF INVENTION: THERAPY
TITLE OF INVENTION: THERAPY
NUMBER OF SEQUENCES: 43

CORRESPONDENCE ADDRESS:
